

Kakis AI Platform Documentation

Introduction

Welcome to Kakis AI, an innovative platform designed to streamline video creation through artificial intelligence. This documentation provides a comprehensive guide to navigating and utilising the platform's features, from initial idea generation to final video export. Kakis AI empowers you to transform text prompts into engaging video stories with customizable roles, styles, and scene management.

Getting Started: Creating Your Exclusive Video Story

1. Idea Generation

Upon landing on the Kakis AI homepage, you are presented with a prompt box to enter your story idea or inspiration. This serves as the foundation for the AI to generate the video script and visuals.

2. Role and Style Selection

Before initiating the creation process, you have the option to define the aesthetic and character elements of their video:

- **Role:** Click the "Role" button to access the **Role Library**. Here, you can select from a variety of pre-defined characters or create new ones. This feature allows for detailed

customisation of character appearance and attributes, influencing the visual output of the video.

To upload your own, click “Private”. You will see this page.

Here's the interface to add new roles. Make sure to give it a name and description. You can either upload an image of your own

The screenshot shows the 'Add New Role' form. It has a title 'Add New Role' and a close button (X) in the top right corner. The form is divided into two main sections. The left section is for the role image, with a placeholder image and the text 'Your role image will appear here.' Below this, there is a link 'Role Examples' with an information icon (i). The right section contains three input fields: 'Name' with a placeholder 'Enter the role name', 'Appearance' with two buttons 'Upload Image' and 'AI Generate', and 'Description' with a placeholder 'Describe the role appearance briefly in two or three sentences.' At the bottom right, there are 'Cancel' and 'Apply' buttons.

Or use the AI to generate one

The "Add New Role" dialog box is a light purple interface with a close button (X) in the top right corner. On the left, there is a large placeholder box for a role image with a person icon and the text "Your role image will appear here." Below this is a link for "Role Examples" with an information icon (i). On the right, the "Name" field has a placeholder "Enter the role name". Below it, the "Appearance" section contains two buttons: "Upload Image" and "AI Generate". The "Prompt" section includes a note: "After generation succeeds, the role description will update from the latest image automatically." and a text area with the instruction "Describe the role appearance, then click send to generate the image." and a send button (up arrow). At the bottom right are "Cancel" and "Apply" buttons.

- **Style:** The "Style" button opens the **Style Library**, offering diverse visual themes such as "Cinematic realism", "3D cartoon," and "Ancient 3D." Choosing a style dictates the overall visual tone and artistic direction of the generated video.

3. Quick Start with Example Prompts

For you seeking inspiration or a quick start, Kakis AI provides several **example prompts** directly on the homepage. These include scenarios like "A cyberpunk detective chasing data

ghosts in neon rain" or "Time traveller preventing historical disasters." Clicking on any of these examples automatically populates the prompt box with the selected prompt.

4. Initiating Video Creation

Once the story idea is entered and any desired roles or styles are selected, click the "Start Creating" button. This action initiates the AI-driven process of script generation and prepares the platform for further customisation.

Advanced Features: Scripting and Asset Management

1. AI Script Chat

After the initial prompt, you are directed to the **AI Script Chat** interface. This interactive feature allows for multi-round conversations with the AI to refine and develop the video script.

You can provide feedback and instructions to iteratively improve the narrative, dialogue, and scene descriptions (see below). Click **“Generate Script”** once you are satisfied.

On the right-hand side, you can view the breakdown of the total number of scenes, characters and shots.

You can edit the fields to your preference

2. Script Outline and Aspect Ratio

Once you are satisfied with the script, you can click “**Generate Video**”, and the detailed outline will show up on the right. The refined script is presented as a **Script Outline**, providing a structured overview of the video's narrative flow. You can also select the desired **Aspect Ratio** for their video (e.g., 16:9), ensuring compatibility with various viewing platforms.

You can edit the scenes directly here. Make sure to click “Save” after your edits

Script Outline

Shot name: Shot 01-2

Duration: 12 sec

Roles: ☒ Mr. Shao

Dialogue: Mr. Shao: "Just us now."

Narration: Off-screen narration or voiceover only.

Shot Description: Close-up on Mr. Shao's face as he sits. He takes a deep breath, closing his eyes for a moment. The tension in his shoulders drops. He opens his eyes, looking at the durian with a mix of respect and hunger. The ambient light shifts subtly, warming the scene. Camera: Static close-up, slight push in. Visible roles: Mr. Shao

Delete **Save**

Before (Original)

Script Outline

Shot name: Shot 01-2

Duration: 10 sec

Roles: ☒ Mr. Shao

Dialogue: Mr. Shao: "It's only me now."

Narration: Off-screen narration or voiceover only.

Shot Description: Close-up on Mr. Shao's face as he sits. He takes a deep breath, closing his eyes for a moment. The tension in his shoulders drops. He opens his eyes, looking at the durian with a mix of respect and hunger. The ambient light shifts subtly, warming the scene. Camera: Static close-up, slight push in. Visible roles: Mr. Shao

Delete **Save**

After (edited version. Time and Dialogue are both changed)

You can also add new scenes or shots under the scenes. Look for these buttons: **Add Role**, **Add Scene** and **Add Shot**

Example of adding a shot. All the fields below are editable (see arrows)

The screenshot displays the 'Script Outline' interface. At the top, there's a header with a document icon, the number '1', and a dropdown arrow. Below this, the 'Script Outline' section contains a form for adding a shot. The form has several fields, each with a blue arrow pointing to it, indicating they are editable:

- Shot ID:** A text field containing 'Shot 04-2'.
- Duration:** A numeric input field with the value '8' and a unit selector set to 'sec'.
- Roles:** A section with a checkbox and the text 'Mr. Shao'.
- Dialogue:** A large text area containing the placeholder text 'On-screen character dialogue only.'
- Narration:** A large text area containing the placeholder text 'Off-screen narration or voiceover only.'
- Shot Description:** A large text area containing the text 'Mr Shao lets out a sigh and goes back to the room. Weather: Heavy rain, Time: afternoon'.

At the bottom of the form, there are two buttons: a red 'Delete' button and a dark blue 'Save' button. Below the form, there's a section for 'Aspect Ratio' with a dropdown menu showing '16:9'. At the very bottom, there's a large blue button labeled 'Generate Video' with a plus sign and the number '25'.

3. Asset Management and Editing

The platform offers granular control over individual video assets through a dedicated editing interface:

- **Role Prompting:** Within this section, you can further edit specific prompts for each character (Role) to fine-tune their appearance, actions, and expressions within the video. This allows for precise control over character portrayal. Same can be done for scenes and shots. Just navigate to them.

Role Prompt

Prompt

Appearance: Middle-aged Asian man, wearing comfortable home attire (a loose linen shirt and shorts). He has short, neat black hair with slight graying at the temples. His expression is calm and contemplative. He wears round, thin-rimmed glasses that reflect the soft indoor lighting.

Voice: Soft, internal monologue style, calm and reflective. No loud dialogue.

Personality: Introverted, appreciative of small pleasures, meticulous, and finds comfort in

- **Shot Timeline:** A visual **Shot Timeline** displays all individual shots that comprise the video. This timeline is crucial for organising and reviewing the sequence of events.

- **Navigation Tabs:** You can easily switch between different management views using the "Roles," "Scenes," and "Shots" tabs. This enables focused editing on specific elements of the video production.
- **Preview:** A **Preview** window is available to review generated images or short video clips for each shot, allowing for immediate visual feedback on changes. You can also upload your own via the "Upload Image" button here.

- **Generate Image/Video:** Buttons to "Generate Image" or "Generate Video" allow you to create or re-generate visual assets for individual shots based on updated prompts or styles.

Shot Prompt

Description

Visuals: Wide shot of the living room. Rain streaks heavily against the large glass windows, distorting the view of the Singapore skyline. Mr. Shao sits comfortably on a beige sofa, looking out at the rain. The camera slowly pushes in.

Dialogue

The rain washes the city clean... but today, it just isolates me with my favorite treat.

Finalisation and Export

1. Generating All Videos

You can also generate all shot images at once. If you are satisfied with the script and individual shot assets, you can click "Generate Shot Videos" to compile all the individual shots into a complete video sequence.

You can view the progress of each scene's video generation in real time.

2. Adding Background Music

You can either add your custom background music (BGM), or keep the original, or upload your own. A window shows up (see below) when you click “Export Video”

You can adjust the duration as well as the volume.

3. Exporting the Video

The final step involves exporting the completed video. The "Export Video" option allows you to download their creation in a suitable format for sharing or further use.

You can view your export history of a project here.

It can look like this (no project exported so far)

Or this if you have a project that's exporting in progress

This is the state when exporting is done, and the video is ready to be downloaded to your device. You can also preview the video here

Preview state:
